

SANTIAGO

SANTIAGO produces lots of bright, smooth skinned attractive tubers, delivering a high yield of medium to large round/oval shaped tubers, with very few out-grades. The good skin finish and uniform shape mean the variety is very suitable for the washing sector. Good resistance to common scab and late blight (phytophthora).

Parentage T2707/1 x Cara
Dormancy Very long (8)
Maturity 2.5 - Late Main-crop
Cooking Type B
Market Fresh- particularly suitable for washing

Tuber Characteristics

Shape:	Round oval
Skin colour:	Cream
Flesh colour:	Cream
Eye Depth:	Shallow
Dormancy:	Very Long (8)
Dry Matter Content:	20%
Overall keeping quality:	Very good
Damage:	6
Bruising:	7
Yield:	high yield of medium sized tubers

Resistance to Diseases & Pests

Common Scab:	6
Powdery scab:	3
Foliage blight:	6
Tuber blight:	5
Blackleg:	5
Wart disease:	Susceptible
PCN Ro1:	S
PCN Pallida:	S

Growing Advice

- As Santiago produces high tuber numbers, extend inter-row seed spacings to deliver larger size in the crop
- Santiago is a late maturing variety, so avoid excessive application of N and K. A fertilisation programme as per maincrop varieties is recommended, but where earlier maturity is required, reduce rates accordingly
- Herbicide sensitivity – Metribuzin can be used pre-emergence only

Key

Scale of 1 to 9 (9 being the most desirable)	Cooking Type
I = Immune	A = Firm
R = Resistant	B = Fairly Firm
S = Susceptible	C = Floury
n/a = Result Not Available	D = Very Floury
